

LOGIC MODEL

TEMPLATE DECEMBER 2025

1. What is a logic framework?

Logic models are graphical representations that show how a program or intervention is designed to work. They outline the connections between inputs, activities, outputs, and outcomes, and can serve to convey program goals and objectives, as well as assist in the design, execution, and evaluation of the program. Logic models help evaluators identify potential gaps, inconsistencies, and areas for improvement in program design and implementation by mapping out the assumptions and theories of change that underpin a program. They also assist in creating evaluation plans and strategies, selecting relevant indicators and measures.

REPUBLIC OF SOUTH AFRICA

2. What are the components of a logic model?

Inputs
(resources)

Activities
(What the programme/
intervention does)

Outputs
(direct products of
activities)

Outcomes
(Short-term, medium, and
long-term changes of the
programme/intervention)

Programme/intervention: _____ (name) Logic Model

Goal: (The overall long-term outcomes the programme/intervention hopes to achieve)

Problem Statement

State problems/issues the programme/intervention attempts to solve or address?

Project Objective 1: [State the programme/intervention objective here and divide the logic model by each objective where applicable. Objectives are concrete and viewed as targets under the general goal.]

Inputs	Activities	Outputs	Outcomes	Impact
Enter human and financial resources that will be used for this programme/intervention.	Enter activities that will help meet the needs or address the issues of the programme/intervention List activities (e.g., Activity 1.1, Activity 1b if there is a sub-activity).	Enter aspects that will be produced/delivered or who will participate in activities?	Enter the changes that will happen after an activity has been implemented?	Enter short, medium and long-term changes which may occur

Project Objective 2: [Add rows as necessary to report on all objectives of the programme/intervention in question]

--	--	--	--	--

Assumptions

Enter factors that need to occur, or which stakeholders who need to be involved, for the programme/intervention to be successful.
How and why will proposed activities lead to proposed outputs, and how will outputs lead to outcomes?

External Factors

Enter factors that are not in the control of the programme/intervention which could affect expected activities, outputs and outcomes (e.g., politics).
